Patch Manager

Simplified, autonomous patching for environments with 3,000+ endpoints

Consistent patching is one of the most effective ways to reduce cyber risk yet it's also one of the most time-consuming and disruptive tasks for IT teams. Manual workflows, failed updates, and siloed tools leave endpoints exposed while wasting valuable staff hours.

NinjaOne Patch Manager transforms patching with automation, intelligence, and enterprise-scale controls. Purpose-built for organizations with 3,000+ endpoints, it delivers secure, stable, and simplified patching across operating systems and applications all from a single platform.

FEATURE	INCLUDED
Windows, macOS, Linux OS patching	✓
Third party application patching	✓
WinGet-Based Windows third party patching	✓
Device Details / Search Grid; Dynamic Groups	✓
Device Reporting	✓
Policy Management	PATCHING MODULES ONLY
Patch Intelligence AI	✓
RBAC, SSO, SCIM	✓
Vulnerability Scanning Integrations	✓
Application Inventory and Deployment	✓
Patch Caching	✓

KEY CAPABILITIES AT A GLANCE

Cross-OS & app patching
Automate updates for Windows, macOS, Linux, and 6,000+ third-party applications.

Patch Intelligence AI
Analyze telemetry and pause unstable patches before they cause disruption.

Vulnerability importing
Ingest CVE/CVSS data from scanners to prioritize remediation by risk.

Patch Caching
Distribute patches efficiently across large sites and remote users.

Policy-driven automation
Define flexible rules, with manual overrides for zero-day or urgent threats.

Why NinjaOne Patch Manager?

Reduce security risk
Close vulnerabilities faster and shrink exposure windows.

Save time and resources
Automate repetitive tasks and cut wasted troubleshooting hours.

Scale with confidence
Consistent patching across thousands of endpoints without added infrastructure.

Minimize operational risk
Eliminate failed patch disruptions with AI-driven assurance.

Strengthen your security stack
Reduce noise so EDR, SIEM, and firewalls can focus on novel threats.

"Automated patching changed how our team works. What used to take weeks of manual effort now runs on schedule, with every device accounted for and far less disruption."

IT DIRECTOR,
SAMPLE ORGANIZATION

Why NinjaOne?

NinjaOne, the automated endpoint management platform, delivers visibility, security, and control over all endpoints for more than 30,000 customers in 130+ countries. It is proven to increase productivity, reduce security risk, and lower costs.

Manage
Monitor and manage every endpoint

Protect
Patch and back up endpoints

Support
Support every employee

HUMAN-CENTERED AI

PROOF POINTS

12
TOOLS CONSOLIDATED

"We retired a dozen separate tools and now run patching, monitoring, and remote support from one console."

Contoso Health

96%
PATCH COMPLIANCE

"Our compliance numbers used to take a week to pull together. Now they are on a dashboard every morning."

Northwind IT Services

35%
LESS TIME FOR PATCHING

"Patch deployments take noticeably less of our week, and we spend far less time chasing failed updates."
