Agent-based patch management for macOS

Automated, policy-driven updates for every Mac in the fleet

Mac adoption keeps growing, and so does the work of keeping those devices patched. Separate tools, manual checks, and users who postpone updates leave gaps that attackers look for.

NinjaOne brings macOS patching into the same platform as the rest of the estate, with the same policies, reporting, and automation.

Why it matters

One console for every OS
Manage Mac alongside Windows and Linux without a second tool.

Less end-user disruption
Schedule restarts around working hours and respect deferrals.

Faster remediation
Close vulnerabilities in days instead of weeks.

Audit-ready evidence
Export patch history for every device on demand.

KEY CAPABILITIES

Agent-based patching
Patch macOS devices on and off the corporate network, without a VPN.

OS and app updates
Keep macOS and third-party applications current from one policy.

Deferral controls
Give users a window to defer, then enforce on schedule.

Compliance reporting
Show patch status by device, group, or organization in seconds.

95%

PATCH COMPLIANCE

"We went from guessing about our Macs to reporting on them every week."

Northwind IT Services

4 hrs

SAVED PER WEEK

"Mac patching used to be its own project. Now it runs with everything else."
